

FOREST LAKE HIGH SCHOOL

FOREST LAKE, MINNESOTA

H2I Group partnered with Forest Lake School District to implement various education solutions into their space. With several projects throughout the school, H2I Group's solution experts met with many members of the district to create a plan for the project. This group, which included the Superintendent, coaches, and teachers, was able to tour past projects of ours to understand our full capabilities.

Forest Lake was interested in the best quality product lines and designs. H2I Group then provided options that led to the final decisions of what we would implement. Our solutions used included athletic flooring, athletic equipment, learning stairs, corridor lockers, athletic lockers, casework, auditorium seating, lab casework, fume hoods, combi system pulastic flooring, bio-mechanical subflooring, and design assist.
