

BIOSCIENCE RESEARCH LABORATORIES **UNIVERSITY OF ARIZONA**

The University of Arizona's Bioscience Research Laboratories is a state-of-the-art research complex that supports life science, translational imaging and molecular research on human health, aging, and disease. The goal was to create a space that would foster individual creativity and collaboration.

H2I Group provided table systems, fume hoods and casework for this project. The project team worked with lab planner Jacobs Consultancy to create a solution that allowed for flexibility and reconfiguration in response to evolving changes in technology and research priorities.

This project was awarded Three Green Globes by the Green Building Initiative and was also LEED Gold Certified.
