

CARVER INNOVATION CENTER FAB LAB JOSEPH BUSINESS SCHOOL

H2I Group helped plan and create Joseph Business School's Carver Innovation Center Fab Lab. The mission of the Carver Innovation Center is to support innovation and business development by providing access to rapid prototyping technology, technical assistance, consulting, and business resources to develop successful entrepreneurs and inventors and foster the launch and continuous growth of business.

H2I Group provided a Stratasys 3D printer, a Universal Laser Systems' laser engraver, and a Roland vinyl printer and cutter for the space. Students get to learn multiple disciplines and acquire hands-on training with various industrial training solutions. The fab lab enables creators, inventors, small businesses, and hobbyists around the area to use their imagination and bring their ideas to life using innovative equipment and resources.
