

## SARTELL HIGH SCHOOL SARTELL, MINNESOTA

The Sartell - St. Stephen School district approached H2I Group with the intention of having a single source for their athletic equipment and flooring at their new high school. We were a part of the process early to assist in product selection and design of their athletic facility.

After visiting many of our past projects, they decided on the BioChannel Star for their gym flooring and Porter Athletic Equipment for their backstops, divider curtains, mat hoist, batting cage, and wall pads. Although athletic solutions were the main focus of this project, we also worked on other parts of the school. The lab solutions added to this project included laboratory furniture, laboratory equipment, and fume hoods. The architectural woodwork and flooring solutions include the learning stairs and stage flooring. Many of our solutions were utilized in this project, which made it easier for Sartell High School to work with fewer companies.

Through this partnership and having them procure the products through Sourcewell, we were able to offer them our solutions at a price within their budget. Our early involvement in assisting with the design and schedule ensured the project was completed on time with no changes.

### DETAILS

Architect: Cunningham Group

### SUPPLIER PARTNERS

BioChannel Star
