

ST. CLOUD TECH HIGH SCHOOL

ST. CLOUD, MINNESOTA

St. Cloud Tech High School was rebuilt with the goal of creating collaborative learning spaces that would assist students in preparing for the workforce. This major project brought in many local firms, including H2I Group, to work together to achieve this goal in a timely manner. Cooperative Purchasing Contracts were also utilized in this project.

H2I Group implemented various athletic, laboratory, lockers & storage, and flooring solutions in St. Cloud Tech High School. More specifically, our team was responsible for lab furniture, lab equipment, fume hoods, wood gymnasium flooring, basketball equipment, volleyball equipment, wall pads, and corridor & athletic lockers.

Willie Jett, the Superintendent at St. Cloud Area School District has said, "Tech High School has become a hub of community activity and a great source of pride. It provides an opportunity for the community to come together and see visibly how this school supports students and prepares them for careers and their future." H2I Group wants to create exceptional solutions for exceptional spaces, and as Jett said, "There is an undeniable WOW factor as you walk through the doors." This major project required a lot of collaboration between many groups but ended up being an overall success.
