

LIFE SCIENCES BUILDING **IRVINE, CALIFORNIA**

For a confidential medical device company, H2I Group provided a wide range of custom products and services to help create sleek and functional lab for their Life Sciences Building.

The new 32,000-square-foot complex is a research lab supporting biomedical engineering R&D. The project's goal was to create a collaborative and flexible space that can be easily reconfigured to support the clients research for years to come.

H2I Group collaborated with architect SmithGroup and general contractor DPR to provide Bedco Table systems, custom ceiling service panels, marker boards with LED lights, stainless steel casework and other custom stainless steel products.

The result is a modern, bold look that will support the company's future growth and cutting-edge research.
