

## SHRIRAM CENTER FOR BIOENGINEERING & CHEMICAL ENGINEERING STANFORD UNIVERSITY

Nestled within Stanford's sprawling campus is the Shriram Center for Bioengineering & Chemical Engineering, a state-of-the-art facility that spans 210,000 GSF. With its architectural designs by Bora, meticulous laboratory planning by CAS, and careful construction by Whiting-Turner, this center stands as a testament to modern engineering and design. H2I Group provided the lab space with Hamilton fume hoods, modular casework and bamboo casework. As students and faculty work within, the Shriram Center not only serves as a hub for learning but also as a model for how design, sustainability, and functionality can coexist to fuel innovation.

### DETAILS

Client: Stanford University

Architect: Bora

Lab Planner: CAS

General Contractor: Whiting  
Turner

### SOLUTIONS

Modular Casework

Fume Hoods

Bamboo Casework
