

## **PRELUDE THERAPEUTICS** **WILMINGTON, DELAWARE**

H2I Group completed a fast-paced laboratory project for Prelude Therapeutics, a precision oncology company based in Wilmington, Delaware. In collaboration with architect Stantec and construction manager Bancroft Construction, H2I Group provided lab casework from Bedco and fume hoods from Labconco. The project included the installation of 38 eight-foot fume hoods, which required careful coordination due to their size and complexity. By working closely with the owner and construction manager, H2I Group established a clear roadmap for success, delivering a world-class lab that will support Prelude Therapeutics in their mission to develop innovative, life-saving medicines for cancer patients. The lab will play a key role in both research and the production of precision oncology therapeutics.
