

## **DSST: ELEVATE NORTHEAST MIDDLE & HIGH SCHOOL**

### **DENVER, COLORADO**

H2I Group partnered with Eidos Architects and Fransen Pittman Construction to convert an existing warehouse and office space into a 118,000-square-foot campus for DSST Public Schools. This project, which was completed in two phases, now serves both middle and high school students. Phase I focused on building out classrooms, offices, student commons, and the cafeteria, while Phase II entailed a comprehensive building renovation that added field/outdoor spaces, a gym, additional classrooms, laboratories, and improvements for car flow and parking. For this project, H2I Group provided plastic laminate casework, millwork, solid surface countertops, fume hoods, epoxy countertops & sinks, metal lockers, gymnasium equipment, scoreboards, and installation. This project was a success, resulting in a charter school that provides world-class STEM education and unique elective courses in the arts, which allows students to foster creativity, ignite academic curiosity, and encourage students to explore their own identities and interests.
