

CSU SPUR VIDA BUILDING DENVER, COLORADO

The CSU Spur Vida Building, part of Colorado State University's campus at the National Western Center, is a unique facility dedicated to advancing animal and human health through education, research, and public engagement. Designed by Clark & Enersen and built by JE Dunn Construction, the Vida Building blends interactive learning environments with fully functional veterinary spaces, allowing visitors to observe real-time procedures and better understand the interconnectedness of animal welfare, food systems, and public health.

H2I Group provided and installed stainless steel lab casework, countertops and shelving, passthrough cabinets, bleachers, divider curtains, and custom fencing and storage. This project reflects our ability to meet complex, multidisciplinary needs with precision and flexibility. The Vida Building now supports veterinary services, hands-on learning, and public engagement in a highly functional, educational environment.
