

ARRUPE JESUIT HIGH SCHOOL EXPANSION & RENOVATION

DENVER, CO

H2I Group partnered with Haselden Construction and MOA Architecture on the Arrupe Jesuit High School Expansion and Renovation project in Denver, Colorado. This multi-phase project transformed the campus to better serve its students and faculty. Phase 1 involved the demolition of the existing Holy Family Rectory and construction of a new addition that included a gymnasium, science classrooms, and a new entrance. Phase 2 focused on renovating the existing high school with new, renovated classrooms and adding a second floor within the original gymnasium.

H2I Group served as a specialty subcontractor solutions provider for a broad scope of furnishings and equipment across both phases. Our team supplied and self-performed the installation of architectural woodwork and casework, laboratory furniture and equipment, gym equipment, bleachers, and lockers. From conception to closeout, H2I Group coordinated across multiple product lines and manufacturers, ensuring a smooth process for our partners and a finished result that met the functional and aesthetic demands of a modern high school learning environment.
