

UCLA MOLECULAR SCIENCES BUILDING LOS ANGELES, CALIFORNIA

H2I Group provided laboratory solutions for the UCLA Molecular Sciences Building 3rd Floor Lab Remodel in Los Angeles, California. The project team included Lionakis as architect and HITT as the construction manager. Our scope included Waldner fume hoods, Bedcolab adaptable systems, and CiF Solutions casework to support a modern teaching and research lab. The Waldner fume hoods delivered added interior height and more usable working space for complex tasks. Adaptable systems and casework completed the lab with organized storage and efficient work zones, installed through our HHI Union team.
